

Dataset 1: Employee Salaries (List)

```
salaries = [45000, 55000, 65000, 75000, 85000]
```

Exercises

Exercise 1

Display all salaries.

Exercise 2

Find:

```
Maximum Salary  
Minimum Salary
```

Exercise 3

Find total salary payout.

Exercise 4

Find average salary.

Exercise 5

Add:

```
95000  
105000
```

to the list.

Exercise 6

Remove:

55000

from the list.

Exercise 7

Sort salaries ascending.

Exercise 8

Sort salaries descending.

Exercise 9

Find second highest salary.

Exercise 10

Display salaries greater than ₹70,000.

Dataset 2: Employee Record (Tuple)

```
employee = (  
    101,  
    "Rahul Sharma",  
    "Data Engineering",  
    75000  
)
```

Exercises

Exercise 11

Display all tuple values.

Exercise 12

Display employee name.

Exercise 13

Display department.

Exercise 14

Unpack tuple into variables and print all variables.

Exercise 15

Display:

```
Length
First Element
Last Element
```

Dataset 3: Batch Students (Set)

```
batch_a = {
    "Rahul",
    "Priya",
    "Amit",
    "Sneha",
    "Farhan"
}
```

```
batch_b = {
    "Priya",
    "Sneha",
    "Neha",
    "Arjun",
    "Farhan"
}
```

Exercises

Exercise 16

Find common students.

Exercise 17

Find students only in Batch A.

Exercise 18

Find students only in Batch B.

Exercise 19

Find all unique students.

Exercise 20

Find students present in one batch but not both.

Dataset 4: Employee Dictionary

```
employee_info = {  
    "employee_id": 101,  
    "name": "Rahul Sharma",  
    "department": "Data Engineering",  
    "salary": 75000,  
    "city": "Hyderabad"  
}
```

Exercises

Exercise 21

Display employee name.

Exercise 22

Display department and city.

Exercise 23

Add:

```
"experience": 5
```

Exercise 24

Update salary to:

```
85000
```

Exercise 25

Remove city.

Exercise 26

Display all keys.

Exercise 27

Display all values.

Exercise 28

Display all key-value pairs.

Dataset 5: List of Dictionaries

```
employees = [  
  
  {  
    "id": 101,  
    "name": "Rahul",  
    "department": "IT",  
    "salary": 50000  
  },  
  
  {  
    "id": 102,  
    "name": "Priya",  
    "department": "HR",  
    "salary": 70000  
  },  
  
  {  
    "id": 103,  
    "name": "Amit",  
    "department": "IT",  
    "salary": 60000  
  },  
  
  {  
    "id": 104,  
    "name": "Sneha",  
    "department": "Finance",  
    "salary": 80000  
  },  
  
  {  
    "id": 105,  
    "name": "Farhan",  
    "department": "IT",  
    "salary": 90000  
  }  
  
]
```

Exercises

Exercise 29

Display all employee names.

Exercise 30

Display employees belonging to IT department.

Exercise 31

Find highest salary employee.

Exercise 32

Find lowest salary employee.

Exercise 33

Find average salary.

Exercise 34

Find total salary payout.

Exercise 35

Display employees earning more than ₹70,000.

Exercise 36

Count employees in IT department.

Exercise 37

Display employee names sorted by salary descending.

Exercise 38

Find second highest salary employee.

Exercise 39

Display all departments without duplicates.
