

Use:

[Killercoda Docker Labs](#)

This is honestly better now for labs/training.

Click:

Start

or:

Login

using Docker account.

Then:

+ ADD NEW INSTANCE

After Instance Opens

Run:

```
docker run -d \  
-p 8080:8080 \  
--name airflow \  
apache/airflow standalone
```

Then

Check container:

```
docker ps
```

Check Logs

```
docker logs airflow
```

You'll See

```
username: admin
password: something-random
```

Open Airflow UI

On the top bar of Play With Docker:

```
OPEN PORT
```

Choose:

```
8080
```

Airflow UI opens.
